

Stalled

score range: 60-74

audited June 02, 2026

You have stopped moving. The site is not pulling you backwards but it is not climbing either. Every competitor who is investing right now is passing you, and the gap widens every month.

What We Found On Your Site

- ✗ Your site has no structured data. That is the code that tells Google you are a local business at a specific address with a specific phone number. Without it, Google cannot connect your website to your Google Business Profile, and you lose ranking in local searches.

How Your Site Breaks Down

We score four pillars equally. Heads up on AI Automation - that one is low for almost every local business right now, which is exactly why we score it equally. Whoever gets there first owns the next five years in your market. Page 2 walks through each pillar in detail.

62 /100

Web Presence

50 /100

Local Search

67 /100

Conversion

10 /100

AI Automation

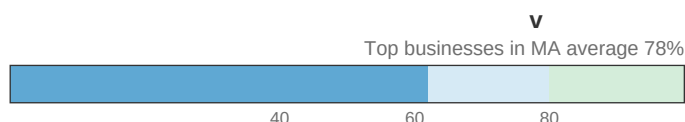

That is the snapshot. The next two pages walk through each pillar, show where your scores sit versus the top performers in your market, and explain how we would close those gaps. The technical work stays on our side.

Where You Stand On Each Pillar

These four pillars carry equal weight in your composite score. The bar for each one shows where you are versus the score range, with a v-marker above showing where top performers in your market typically sit.

10/100

How We Would Improve Each Pillar

Web Presence (62/100)

The foundation is decent but it is not winning. We would tighten the homepage hero, rewrite weak service-page copy, fix the technical gaps we found in our audit, and bring the design up to current standards. Smaller lift than a rebuild but meaningful upgrade.

Local Search Optimization (50/100)

You are showing up but not winning the local pack. We would push harder on service-area page depth, add monthly local-intent blog content, lock in citation consistency, and tighten the local schema. Steady climb in local rankings within 60 to 90 days.

Conversion Strategies (67/100)

Decent conversion path but room to optimize. We would A/B test the CTA copy, add a multi-step quote quiz to qualify higher-intent leads, and instrument form-tracking so we know which sources actually convert. Most of the gap closes from clearer next steps and faster forms.

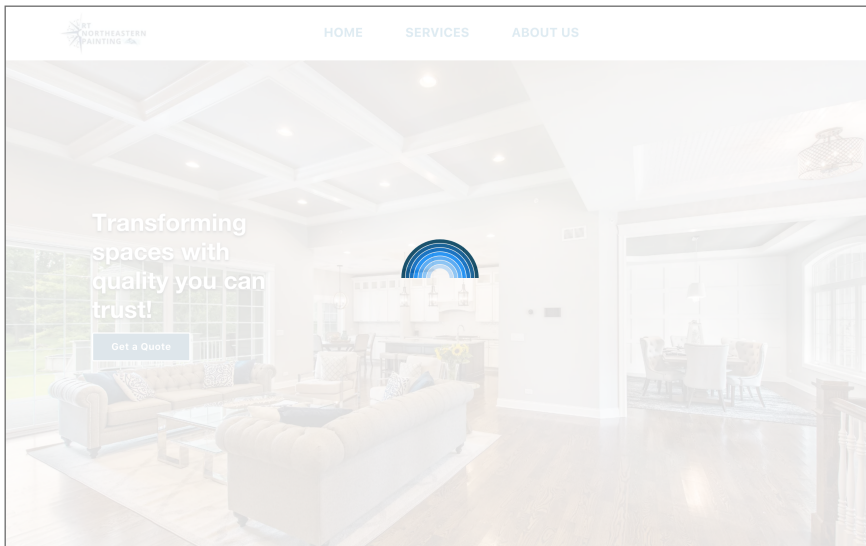

AI Automation (10/100)

This is the pillar where almost nobody in your market is winning yet, and that is the opportunity. Roughly nine out of ten local services businesses have nothing in this category, which means whoever gets there first owns the next five years of growth in your area. We would start with: an AI chat widget that captures inquiries 24-7, online appointment booking that ties directly into your calendar, automated follow-up sequences for leads that do not close on first contact, review-request automation after every completed job, and a CRM that quietly turns inquiries into booked work. You stay focused on the work that pays. The system handles the inquiries, the follow-ups, and the reminders so fewer leads slip through.

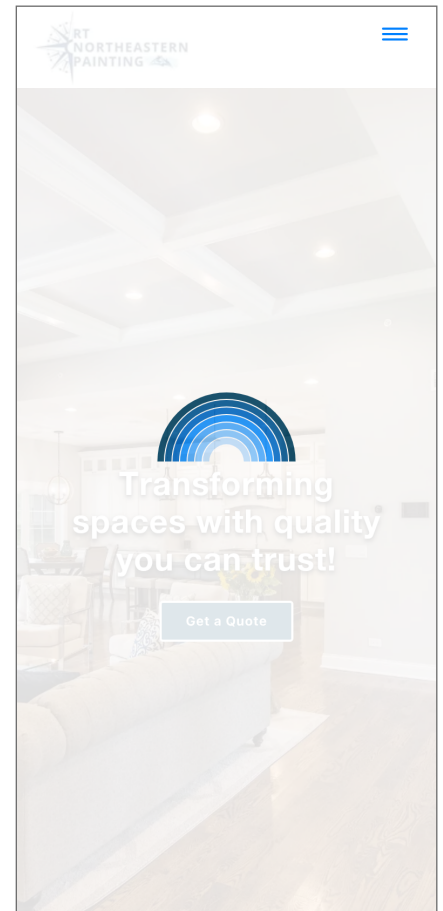

Note: this audit measures what is visible on your public site. Tools that load via JavaScript or live behind logins (chat widgets, CRMs, dispatch

What Your Site Looks Like Today

Here is your homepage as a visitor sees it right now. Desktop on the left, mobile on the right. The findings on pages 1 and 2 are not abstract - they are visible in what a prospect sees the moment they land on your site.

Desktop view

Mobile view

What the audit measures sits underneath what you see here. The title tag, the meta description, the schema markup, the click-to-call wiring - none of it is visible in this screenshot, but Google reads every line of it and decides whether to send people to your site or the next business in the list.

How We Would Approach This

Your site is doing the basics well. Our approach would be targeted improvements rather than a rebuild - close the specific gaps called out on page 2, push harder on the local search side where most of your remaining lift lives, and add the automation layer that turns more of the inquiries you already get into booked jobs.

Where The Biggest Lift Lives

Looking at the four pillars side by side, your biggest gap is in AI Automation. You scored 10 against a top-performer benchmark of 40 for businesses in your market. That is the pillar we would close first because it is where the most growth is sitting on the table. Across all four pillars, your average lift target is about 19 points. That number sounds small on paper, but every few points moves you a step in the rankings, holds another visitor on the site, or saves another inquiry from slipping through.

What Changes For You

Title tags, schema markup, and which AI tool plays nice with which CRM stay on our side. Here is what changes on yours:

More of the right people find you.

When someone in your service area searches for what you do, you show up. Not buried on page two - in the local pack, in the AI answers, in the maps.

Fewer of the people who find you bounce.

Clean site, fast load, clear next step. Visitors stop leaving for the next result and start filling out your form or tapping your phone number.

Your calendar fills up without you watching it.

Automation handles the inquiries, the booking, the follow-up, and the review requests. You wake up to booked jobs, not to an inbox.

You stop competing on price.

A site that looks like the top business in your market lets you charge like the top business in your market. Instead of having to justify your pricing, the site does it for you before the first conversation.

Want to talk through this?

Reply to my email and I will walk you through the findings, what we would do first, and what it would cost. No pitch deck, no pressure.
